REJECTIONS OF CLAIMS BASED ON PRIOR ART

The following is a quotation of 35 U.S.C. '103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 15 is rejected under 35 U.S.C. '103(a) as being unpatentable over the patent to Bois (6,131,374) in view of Ausnit (3,746,215). The patent to Bois shows bag forming process comprising of longitudinally moving a film and attaching crosswise a fastener at 70 where in the fastener comprises laterally positioned webs on each of its profiles connected in aU-shape (see Figure 3). The patent to Bois lacks the use of pouring spout. The patent to Ausnit shows a bag that comprises a structure 17 in combination with the fastener a U-shaped fastener/webs structure (see Figures 2 and 4) that is long enough to extend over the fastener when it is inverted over the fastener (see Figure 6) and act a s pouring spout. It would have been obvious to one skilled in the art to increase the length of the U-shaped webs 130 of Bois so that it could act as a pouring spout when inverted over the fastener 112 as shown by Ausnit.

Claim 15 is rejected under 35 U.S.C. '103(a) as being unpatentable over the patent to St. Philips (5,964,532) in view of Ausnit (3,746,215). The patnet to St. Philips shows a bag with a fastener 14 comprising of interlocked profiles and webs 24,30 that extend into and joined together within the bag and which has a line of weakness 38. It would have been obvious to one skilled in the art to increase the length of the U-shaped webs 24,30 of St. Philips so that it could act as a pouring spout when inverted over the fastener 14 as shown by Ausnit. The application of

Art Unit: 3721

a fastener crosswise to a longitudinally extending web in a bag making process is well known in the art and such attachment would have been obvious to one skilled in the art.

ADDITIONAL REFERENCES CITED

The following prior art is made of record but has not been relied upon in the rejection of claims. However, the prior art is considered pertinent to applicant's disclosure.

The patents to Buchman, Amundson, , Ausnit (792), Ausnit (653), Ausnit (376), Ausnit (801), Ausnit (230) and Madsen show film webs that are normally positioned within a bag and when inverted to cover the fastener act as a pouring spouts.

The patents to Johnson and van Erden show bag forming operatins with the fastener strip being attached crosswise to a film web.

Any inquiry concerning this communication should be directed to **Examiner John Sipos** at telephone number (703) 308-1882. The examiner can normally be reached from 6:30 AM to 5:00 PM Tuesday through Friday.

The FAX number for Group 3700 of the Patent and Trademark Office is (703) 305-3579.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Peter Vo, can be reached at (703) 308-1789.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group Receptionist whose telephone number is (703) 308-1148.
